

A detailed close-up of a Bvlgari Octo Finissimo Tourbillon Chronograph Skeleton Automatic watch. The watch features a dark, multi-faceted case and a transparent sapphire crystal case back that reveals the intricate mechanical movement. The movement is highly visible, showing various gears, jewels, and the tourbillon cage. The dial is dark with white hour markers and hands. The Bvlgari logo is visible on the bezel. The watch is set against a dark background.

THE SIXTH WORLD RECORD IN SIX YEARS

OCTO FINISSIMO TOURBILLON CHRONOGRAPH SKELETON AUTOMATIC WATCH

BVLGARI OCTO FINISSIMO CONTINUES ITS SAGA MADE OF EXCELLENCE AND PERFORMANCE

Fueled by passion, and driven by excellence and artistry, *Octo* continues to shift the paradigm of modern-day watchmaking with its latest and sixth World Record-breaking design: the *Octo Finissimo Tourbillon Chronograph Skeleton Automatic Watch*. The saga goes on with a new exceptional creation that highlights a mechanical manufacture ultra-thin skeleton movement with automatic winding, chronograph single-push and tourbillon. All those features combined for a 7.40mm total thickness, a concentrate of excellence and performance.

From the first model launched in 2014, Bvlgari *Octo* watch has built a saga of groundbreaking thinness records. But beyond those successive prowess's, *Octo Finissimo* has reset the codes of watch design to become a new cult watch model.

Since that time, it has evolved into a central theme of the *Octo* collection, a distinctive characteristic

of the watch known for its charisma, elegance and daring. There is no limit to *Octo*, as seen in the continuity of its progress, and that the watch has continued to achieve new world records with each passing year.

This new *Octo Finissimo* launched during the Geneva Watch Days trusts again the World Record podium in the ultra-thin and ultra-complicated automatic watches: it combines the single-push chronograph with a tourbillon functions, driven by a peripheral oscillating mass for a 3.50mm movement thickness. There is no equivalent including all these features on the market within such a reduced thinness. The innovations to deliver this development have privileged the most refined technical solutions such as a horizontal clutch and a column wheel securing the best performances.

The *Octo* saga is driven by a passion for excellence, showing a remarkable attention to

detail and unique know-how in all of its designs. Beyond that, it is also a story of performance. Octo is known for its mechanical brilliance, and leverages the expertise of Swiss watchmaking to create new editions that are technical masterpieces — a feature that is made even more impressive by the thinness of the models.

Since its inception, Octo has been visionary in terms of the sleekness of its designs. With each new record holder, it seeks to make the impossible real — and has succeeded. The collection has achieved this miniaturization without sacrificing performance.

Therein lies the genius of Octo.

"2020 is the year of the World records at Bvlgari with this new ultra-thin Octo Finissimo Tourbillon Chronograph Skeleton Automatic. It is the 6th World record in a row for Octo Finissimo. We already launched last January in Dubai Serpenti Seduttori Tourbillon, the smallest ladies watch Tourbillon on the market which complements Diva Finissima Minute Repeater, the thinnest chiming ladies watch available on the market. Complications and records are without genders at Bvlgari!" commented Jean-Christophe Babin, CEO of Bvlgari.

BVLGARI
ROMA

Bvlgari watchmaking has long established itself as a master of *L'Estetica della Meccanica*, fusing its soul — that of *The Roman Jeweller* — with the technical expertise of Swiss watchmaking and mechanical movements. In doing so, it has led its own revolution in watchmaking, uniting cutting-edge aesthetics with technical mastery in a way that is utterly unique and singular to the Maison. In this way, Bvlgari has assumed the role of *The Roman Jeweller of Time*.

Within the luxury watches landscape, Bvlgari is unrivalled, carving out a niche of excellence with its provocative pieces. The *Octo* saga

is perhaps the greatest example of Bvlgari's signature disruptiveness, its passion for pushing the envelope and moving the needle on modern day watch design, with seemingly boundless vision and execution.

The six-year-long *Octo* saga, and the continuation of the story with yet another world record breaking *Finissimo*, highlights the exceptional nature of Bvlgari and its designs. It is part and parcel of the larger story of the Roman jeweller, which has always combined technical mastery with an unbridled visionary approach.

Sandblasted titanium bracelet with folding buckle.

Limited edition of 50 pieces.

THE OCTO FINISSIMO WORLD RECORD SAGA

2014

OCTO FINISSIMO TOURBILLON MANUAL

Featuring the thinnest hand-wound flying tourbillon movement in the world, **BVL 268 caliber**, only **1.95 mm thick**, the *Octo Finissimo Tourbillon Manual* in platinum immediately becomes a major and innovative player in the field of watchmaking.

2016

OCTO FINISSIMO MINUTE REPEATER

Bvlgari unveils the *Octo Finissimo Minute Repeater* in a titanium case, featuring the ultra-thin **3.12mm BVL 362 movement**. A bold design, featuring cut-out dial markers that enables the sound to pass through from the back of the movement, thus amplifying the volume of the chimes.

2017

OCTO FINISSIMO AUTOMATIC

Bvlgari presents its third world record, the *Octo Finissimo Automatic*, the slimmest ultra-thin self-winding watch on the market, featuring a total thickness of just 5.15 mm and its self-winding **BVL 138 caliber** of just **2.23 mm** thick for a 40mm diameter.

2018

OCTO FINISSIMO TOURBILLON AUTOMATIC

Bvlgari introduces a new breakthrough on the front of extreme slenderness. At just **3.95mm** thick, *Octo Finissimo Tourbillon Automatic* claims a new watch industry record for the fourth time. An automatic version of the tourbillon caliber, the **BVL 288**, introduces a bold new design for Bvlgari — a peripheral winding rotor, allowing one to view the movement in its entirety with the benefit of automatic winding.

2019

OCTO FINISSIMO CHRONOGRAPH GMT AUTOMATIC

With its manufactured integrated movement that displays the classical chronograph functions, *Octo Finissimo Chronograph GMT Automatic* is the thinnest ever mechanical Chronograph in watchmaking history. The watch features a modern horizontally coupled, column wheel controlled chronograph with peripheral winding and a second time zone function, all within the **3.30mm** thin movement, caliber **BVL 318**.

2020

OCTO FINISSIMO TOURBILLON CHRONOGRAPH SKELETON AUTOMATIC

At just **3.50mm** thick, the new *Octo Finissimo Tourbillon Chronograph Automatic* movement claims a new watch industry record for the sixth time. The watch features Bvlgari's record breaking chronograph, now in a two-counter display, as well as a tourbillon at six o'clock. The dial is skeletonised to fully show the complexity of the **BVL 388** caliber from the front.
